

COS202 Practical Assignment Documentation

Student Information

Name: Abass Nurudeen

Matric Number: 241203039

Department: Data Science

Institution: Adekunle Ajasin University (AAUA)

Course: COS202

Project Title

Python Practical Assignments

Introduction

This project consists of two Python applications developed as part of the COS202 practical coursework: a Mathematical Calculator and a Personal Pocket CGPA Calculator (PPC).

Objectives

Apply Python programming concepts, develop interactive applications, demonstrate selection control statements and loops, and handle user input and calculations.

Project 1: Mathematical Calculator

A menu-driven calculator supporting addition, subtraction, multiplication, division, modulus, clear screen and exit.

Project 2: Personal Pocket CGPA Calculator

Calculates GPA on the 5-point grading system using course grades and credit units.

Programming Concepts Used

Variables, data types, input/output, functions, if/elif/else, loops and exception handling.

Sample Output

Insert screenshots of both programs before submission.

Conclusion

The project demonstrates practical application of Python programming to solve real-world calculation problems.
